

Networking Instructions for Session Manager DB

1. Install the Session Manager DB program from our download page onto a server, and create an extra user login or two with User Manager.
<http://www.turbotagdownload.com>
2. Follow these instructions to open up the SQL Express instance to external connections:
<http://support.microsoft.com/default.aspx?scid=kb;EN-US;914277>
3. Install the Session Manager DB client software package from our download page onto one or more client computers.
4. On each of the client installations, open the file **ttdb.udl** from **C:\Program Files\Turbotag\data** and on the connection tab, edit the server definition as follows:

Current Value: ".\TurboTag" (as shown below)

New Value: "nn.nn.nn.nn\TurboTag" where nn.nn.nn.nn is the server's IP address.

5. When you have changed the server name, enter the following information for a test login:

Username: **EventViewer**

Password: **obmTIqMLVBtQCxK5Eb1t**

6. Click on "Test Connection" as shown above; you should see the pop-up message "Test connection succeeded" as shown. If so, click OK to save the change.
7. Test the Session Manager DB program, and log in as one of the new users from step 1. Set the password for all new users.
